*1 Some probes require an external power supply (1103) when used with the TDS3000 series

*2 When using with MSO / DPO2000 series, a dedicated AC adapter (119-8726-00) and a power cable (161-0342-00) are required.

*3 When using with MSO / DPO3000 series, depending on the probe you may need a separate AC adapter (119-8726-00) and a power cable (161-0342-00).

*4 When using with MSO / DPO5000 series, separate AC adapter (119-8726-00) and power cable (161-0342-00) may be required depending on the probe model and number.

*5 When using with TBS2000 and MDO3000 series, the total power draw capacity can not exceed the maximum power supply capacity of the oscilloscope, see [here](#) for more information.

*6 Readout does not function in the TBS2000 series.

Passive Probes

Passive voltage probes ship standard with most [oscilloscopes](#) and provide a low cost, general purpose probing solution. Generally, these probes lack the performance of an active voltage probe but provide the ruggedness and wide dynamic range suitable for visualizing signals over a broad range of applications. Tektronix has released a new class of passive probes that redefine performance in the passive probe product category.

Tektronix new class of passive probe solutions offer:

- Best-in-class bandwidth up to 1 GHz
- Best-in-class input capacitance as low as 3.9 pF which minimizes probe loading effects
- Best-in-class input capacitance which minimizes performance loss when long ground leads are attached
- Automated probe compensation eliminating the need for the compensation screwdriver

Tip mates directly with MMCX connector

- Shielded, low inductance connection to test points.
- Secure hands-free connectivity.
- Uses low-cost, industry-standard MMCX connectors.
- MMCX connectors may be "backed off" and used as unplanned test points.

Adapters connect to standard-pitch pins

- Two adapters available for connecting to square pins.
- Spaced on 0.1 in. (2.54 mm) centers.
- Spaced on 0.082 in. (1.57 mm) centers.
- Solder tool available for pricing 0.002 in. pins.

"Y" leads connect to non-standard-pitch pins

- "Y" lead adapter works with the 0.1 in. adapter.

Tripod mount for added stability

- Tripod mount adds stability to square-pin mounted probes.
- Tripod may be glued down to the PCB.

A low voltage single-ended probe is typically used for measuring high-speed, ground referenced signals up to 12 V. These low voltage probes are the best choice for making measurements on high impedance, high frequency circuit elements which require minimal probe loading. Users should select probes with a low input capacitance specification (~1 pF) to minimize the probe's loading effect on the circuit. A probe with lower input capacitance will offer higher input impedance at higher frequencies.

Tektronix Low Voltage Single-ended Probe solutions offer:

- Bandwidths up to 4 GHz.
- Very high input impedance with low input capacitance (<1 pF)
- Most extensive set of probe accessories for optimum measurement performance

Power Rail Probes

Power Rail Probes

Model	Bandwidth	Attenuation	Input Impedance	Dynamic Range	Offset Range	Interface
TPR4000	4 GHz	1.25X	50 k Ω DC – 10 kHz, 50 Ω AC > 100 kHz	± 1 V	± 60 V	TekVPI
TPR1000	1 GHz	1.25X	50 k Ω DC – 10 kHz, 50 Ω AC > 100 kHz	± 1 V	± 60 V	TekVPI

The TPR1000 and TPR4000 probes provide a low noise, large offset range solution for measurement of ripple on DC power rails ranging from -60 to $+60$ VDC. Tektronix's power rail probes offer industry leading low noise and high offset range required to measure AC ripple between 200 μ V p-p and 800 mV p-p at up to 4 GHz.

Key Specs:

- <300 μ V p-p noise on 6 Series MSO (20 MHz BW Limit)
- <1 mV p-p noise on 6 Series MSO (Full Bandwidth)
- ± 60 V offset range
- Offset setting error: ± 2 mV max, ± 0.4 μ V typical

P76CA-292C
33 GHz Bandwidth Coaxial Adapter with 2.92 mm (Male) connectors and 6" of high performance cable. This adapter is calibrated at the input connectors and is ideal for directly connecting to devices with 2.92 mm or SMA output connectors.

P76CA-SMP
33 GHz Bandwidth Coaxial Adapter with SMP (Female) connectors and 6" of high performance cable. This adapter is calibrated at the input connectors and is ideal for directly connecting to devices with SMP output connectors.

P76TA
30 GHz Bandwidth P7500 Tip Adapter. The probe and oscilloscope system will support up to 30 GHz of bandwidth when this adapter is used with the P75PST Performance Solder Tip.

P76CA-292
33 GHz Bandwidth Coaxial Adapter with 2.92 mm (Female) connectors. This adapter is calibrated at the input connectors and is ideal for use with off the shelf or custom cables. Low skew cable pairs should be used to preserve full bandwidth performance.

Unique probe filters
The P7600 Series probes contain probe specific S-parameter data. Attaching a P7600 probe to a MSO/DPO70000DX or DPO70000SX oscilloscope transfers this data to the instrument to create unique system DSP filters based on the specific S-parameter data of the oscilloscope and the probe. Creating unique filters based on the specific response of the system is critical as bandwidths increase. At bandwidths of 33 GHz, small variations in the signal path can lead to significant variation in frequency response. These variations are corrected using DSP filtering.

P7700 & TDP7700 TekFlex™ Accessories

DC Calibration Fixture
Order #: 067-4889-xx
Use this fixture to calibrate your probes DC accuracy when making critical measurements. For P7700 probes.

Probe Deskw Fixture
Order #: P77DESKEW
Use this fixture to time align your TekFlex probes for the best timing accuracy to make critical timing measurements.

P77BRWSR
16 GHz handheld browser accessory enables hand or fixtured probing with adjustable tip spacing. The browser's tips are adjustable in spacing using a convenient thumb wheel. A headlight on the tip enhances visibility of the probe point and can be switched on and off as needed.

The browser tips are constructed of high strength BeCu and super-ceramic resistors. Each pin has integrated pogo springs and a crown cut tip to help make solid mechanical connections to components and traces.

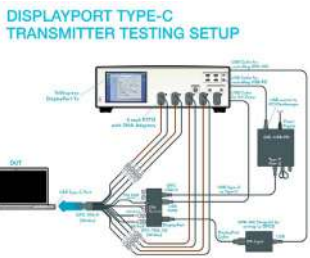

Probe Stand and wand accessories for both hands free and hands on browsing give you flexibility when you are debugging your circuit.

TekFlex connector technology
The P7700 & TDP7700 Series TriMode probes use the TekFlex connector technology that combines a high-speed signal path with power and communication support for an active buffer tip in a single, easy to attach accessory connector. The TekFlex connector has a pinch-to-open design that when open requires minimal force to attach an accessory tip. When the TekFlex connector is closed, it provides a secure connection to the accessory to avoid accidental disconnections.

P77C292MM
SMA/2.92mm adapter for connecting to coaxial connectors RF/coaxial connectors, such as SMA, are often found on test fixtures or on prototype board designs. Attaching a P7700 or TDP7700 series probe to these onboard connectors is easy with the SMA adapter.

The P77C292MM adapter includes TriMode functionality enabling differential, single ended, and common mode measurements. Include variable termination voltage that can be set manually or automatically using voltage sense circuitry in the P7700 or TDP7700 probes over a range of ± 4 V for testing display technologies like HDMI and Display Port.

P77STCABL
20GHz solder down accessory with a long reach, flexible cable combined with an active buffer amplifier on the tip. The long tip reach make it great for escaping tight board geometries while maintaining electrical performance.

P77STFLXA
20GHz solder down, flex-circuit accessory with an active buffer amplifier on its tip. Each tip has a stored factory AC calibration which is de-embedded automatically on the instrument

P77STFLXB
16GHz solder down, flex-circuit accessory provides a probing solution for DDR4 and LPDDR4 electrical validation when used with Nexus XH Series Interposers. Each tip has a stored factory AC calibration and a nominal XH series interposer response which is de-embedded automatically on the instrument

P77STFLRB
16GHz solder down, Long-Reach, flex-circuit accessory provides a probing solution for DDR and LPDDR electrical validation when used with Nexus XH Series Interposers. The FLR tips' increased flexibility and long reach helps access inaccessible test points. Each tip has a stored factory AC calibration and a nominal XH series interposer response which is de-embedded automatically on the instrument.

P77STFLRA
20GHz solder down, Long Reach, flex-circuit accessory with an active buffer amplifier on its tip. The FLR tips' increased flexibility and long reach helps access inaccessible test points Each tip has a stored factory AC calibration which is de-embedded automatically on the instrument.

Reorder: 196-3465-XX

Square Pin Adapter

Reorder: 016-1884-XX

Usable bandwidth
<3.5 GHz

Typical rise time
<120 ps

Connection type
.0.025" Square Pin

Use the square pin adapter to connect the probe to other accessories, such as the Y-lead adapter. The inputs on the adapter are spaced 0.100 inches apart.

Y-Lead Adapter

Reorder: 196-3434-XX

Usable bandwidth
<100 MHz

Typical rise time
<3.5 ns

Connection type
0.025" Square Pin

Use the Y-lead adapter to extend the reach of the probe and to connect to 0.025 inch square pins spaced as far as 1.5 inches apart. Use with Square pin adapter

IC Micro-Grabber

Reorder: SMK4

Usable bandwidth
<100 MHz

Typical rise time
<3.5 ns

Connection type
Leaded components

IC Micro-Grabber Use the IC Micro-Grabber to probe the leads on integrated circuits that are surface-mounted.

MicroCKT Test Tip

Reorder: 206-0569-XX

Usable bandwidth
<100 MHz

Typical rise time
<3.5 ns

Connection type
Leaded components

Use the MicroCKT test tips to access dense circuitry and IC leads spaced down to 10 mil-centers.

Solder in Adapter + Resistor Kit

Solder in Kit: 020-2505-XX
Solder in adapter: 016-1296-XX
Resistor Kit: 020-2506-XX

Usable bandwidth
Up to 4.3 GHz

Typical rise time
Down to 124 ps

Connection type
Solder in

Use the solder-in adapter with the resistors and wires in the kit to create soldered test points to your circuit.

Current Probes

Tektronix current probe solutions offer:

- The broadest range of AC/DC and AC-only current probes
- Measurement accuracy from μ As to 2000 A
- Best-in-class bandwidth up to 120 MHz
- Best-in-class current clamp sensitivity down to 1 mA
- The only products with 3rd Party Safety Certification (UL, CSA, ETL)
- The only products with bare wire voltage ratings
- Automatic readout and scaling when used with Tektronix oscilloscopes so you don't have to convert volts to amps or manually set the scaling

A high voltage single-ended probe is typically used for measuring ground referenced signals up to 40 kV. However, some single-ended probes are designed for instruments with isolated or floating inputs for measurements that are not ground referenced. Users should select probes with a low input capacitance specification (< 4 pF) to minimize the probe's loading effect on the circuit because a probe with lower input capacitance will offer higher input impedance at higher frequencies.

Tektronix High Voltage Probe solutions offer:

- Best-in-class bandwidth up to 800 MHz
- Best-in-class probe loading with input capacitance as low as 1.8 pF
- The only products with 3rd Party Safety Certification (UL, CSA, ETL)
- Most extensive set of probe accessories

Differential Probes – High Voltage

High Voltage Differential Probes

A high voltage differential probe is used for measuring the voltage difference between two test points where neither test point is at ground. High voltage differential probes from Tektronix can be used for signals up to 6000 V. These probes are the best choice for making non-ground referenced, floating or isolated measurements in large part due to their common mode rejection capability. These products are designed, manufactured, and serviced by Tektronix.

Tektronix High Voltage Differential Probe solutions offer:

- Best-in-class bandwidth and probe loading
- The only products with 3rd Party Safety Certification (UL, CSA, ETL)
- High and medium voltage products to support varying dynamic range and measurement resolution requirements
- Most extensive set of probe accessories

IsoVu® probes are the right tool for today's demanding power measurement challenges given their industry leading 1 GHz bandwidth, 160 dB or 100 Million to 1 common mode rejection, 60 kV common mode voltage, large ± 3300 V differential range and superior probe loading.

Optimize for Performance and Efficiency

The benefits of a power design can only be realized when the switching circuit, the gate drive circuit, and the layout, are all properly designed and optimized. IsoVu can be used to:

- Characterize the gate drivers, Vgs, Vds, and Is
- Characterize the time alignment of high and low side events
- Optimize and tune the switching characteristics

Optical Probes

The [DPO70E Series Optical Probes](#) paired with a DPO70000 real time oscilloscope delivers high performance and advanced debug capabilities that are necessary for designers to fully troubleshoot 400G PAM4 signals (up to 56 Gbd) and reduce time to market needs. These probes can also be used as a conventional O/E with a flat frequency response for general signal acquisition up to their respective bandwidth; 33 GHz using the DPO70E1 or 59 GHz using the DPO70E2.

- Versatile and modular design for use with multiple high-performance real time oscilloscope models
- Broad wavelength range with FC/PC and FC/APC connector options
- Deep optical PAM4 and PAM2 (NRZ) signal analysis and error detection
- User selectable Optical Reference Receivers (ORR)
