

ACCESS Master MT9085 Series

testforce

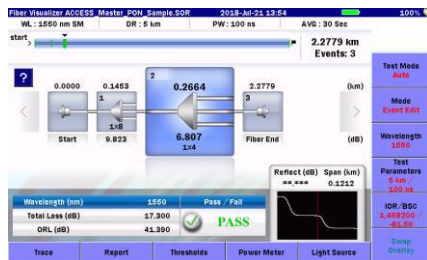

Strengthen of MT9085 Series: 1/5

- All Optical Fiber Evaluation Functions in One Tester

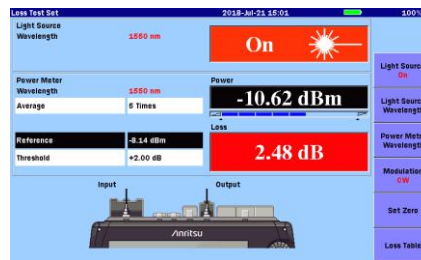

- The ACCESS Master MT9085 series is an all-in-one tester with OTDR, OLTS, and Visible Light Source functions required for evaluating optical fiber transmission links. It supports optical loss and reflectance measurements and analysis as well as evaluation of fiber events.
- In addition, connecting an external fiberscope (VIP—sold separately) enables inspection and automatic Pass/Fail evaluation of scratches and contamination on the fiber end face.

<OTDR>

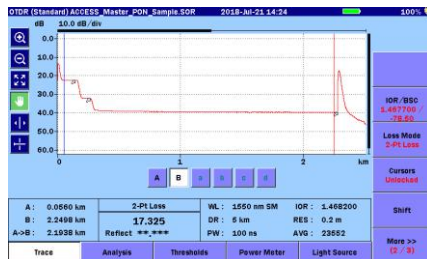

<OLTS, Power Meter>

<Video Inspection Probe (VIP)>

<Visual Light Source (VLS)>

Strengthen of MT9085 Series: 2/5

- Pursuing Easy On-site Measurement

Keeps Basic ACCESS Master Design Concept

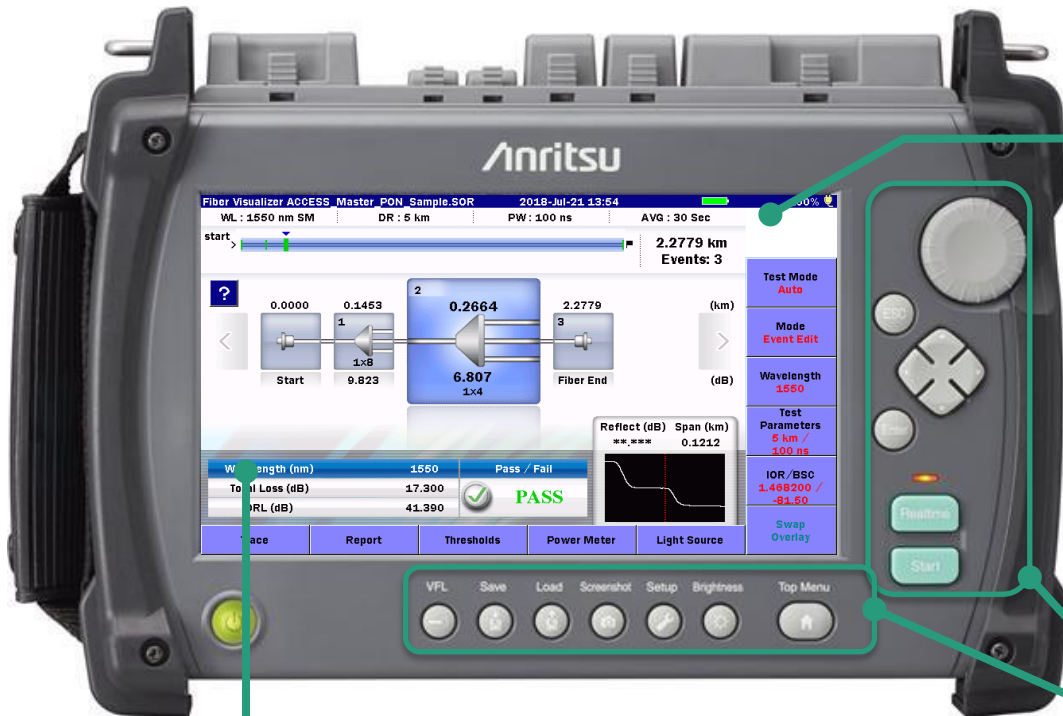

- Compact and Lightweight
- 12-hour Battery Operation

8-inch
Wide Touch
Screen

Improved operability due to synergy between **large touchscreen** and **hard keys** with no need to remove work gloves

Hard
keys
Easy Operation

Built-in rotary knob, hard keys and shortcut keys for efficient manual trace analysis

Easy
Analysis

Fiber Visualizer

At-a-glance confirmation of loss and reflectance measurement results **Pass/Fail** evaluation using fiber event icon schematics

Fiber Visualizer

Strengthen of MT9085 Series: 3/5

- Improved Operability with 8-inch Wide Touchscreen and Hard Keys

- OTDR Trace Analysis
 - Trace magnification
 - Cursor operation and marker positioning
- Easy analysis using synergy of both touchscreen and hard keys
- Data Saving and Report Creation
 - Intuitive data file naming using touchscreen input matrix
- Fast Application Start
 - File saving/loading
 - Screen capture
 - Visual light source
- Start applications using shortcut keys without screen transitions

Strengthen of MT9085 Series: 4/5

- Easy-to-Read Measurement Results Pass/Fail Evaluation

The image displays three screenshots of the Anritsu MT9085 Series software interface, each highlighting a different measurement function and its Pass/Fail evaluation results.

VIP (Visual Inspection Probe): The screenshot shows a table of defect data and a corresponding image of a fiber end face. The table includes columns for Defects, Count, Area, and Scratch Count. A red box highlights the word "FAIL" in the bottom left corner.

Probe Model	Core	Cladding	Adhesive	Contam.
60306B	25	120	130	250
Defects	PASS	PASS	PASS	FAIL
Count	0	2	0	203
Area	0.00	3.77	0.00	2276.45
Scratch	PASS	PASS	PASS	PASS
Count	0	0	0	0

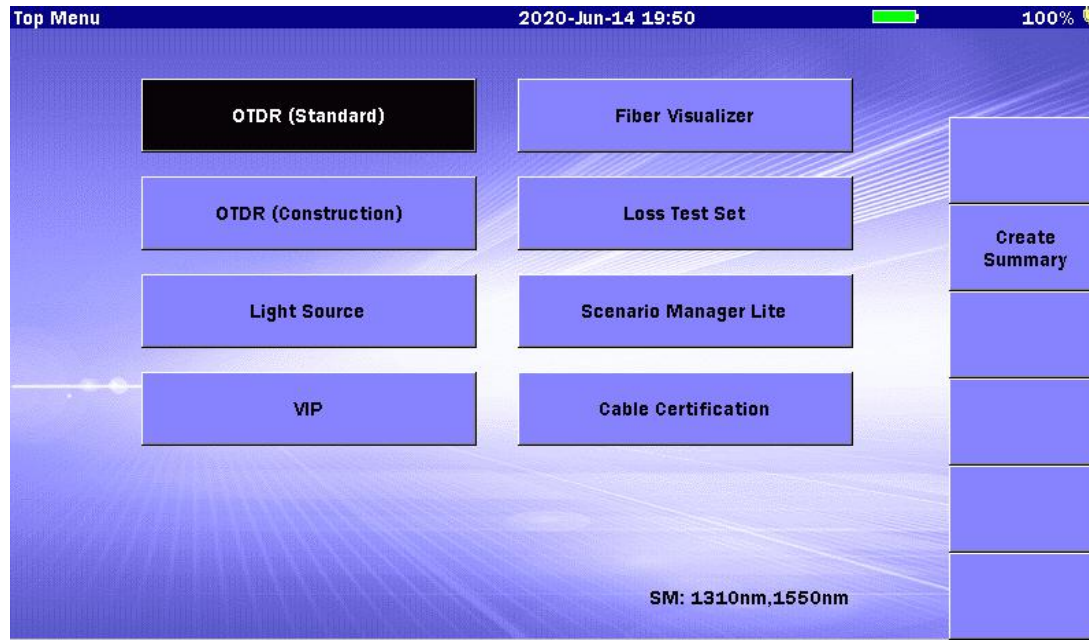

OTDR (Optical Time Domain Reflectometer): The screenshot shows a distance-based trace with a reflection peak at 6.807 km. A green box highlights the word "PASS" in the bottom right corner.

OLTS, Optical Power Meter: The screenshot shows a power measurement of 2.14 dB. A red box highlights the value "2.14 dB" and the word "On" in the top right corner.

- In many cases, onsite measurement requires Pass/Fail evaluation of the optical fiber path trace in accordance with installation work specifications
- The MT9085 series displays easy to understand Pass/Fail evaluation results for each of the OTDR Fiber Visualizer, OLTS, and VIP functions
- These evaluations are based on preset threshold values and international standards

Strengthen of MT9085 Series: 5/5

- Top Menu Selection of Measurement Application

- The MT9085 series keeps the popular Top Menu selection method from previous ACCESS Master series
- Any required application can be chosen at any time by pressing a dedicated Top Menu hard key

Measurement Applications (OTDR): 1/8

- Multiple wavelength Models for Every Measurement requirement
 - Full range of models with multiple OTDR wavelengths matching customer applications
 - Ranging from,
 - Optical fiber operations and maintenance
 - Live network measurements and evaluation
 - Macro-bending analysis.
 - Also many models for applications such as PON network evaluation

Option	Wavelength	Dynamic Range	Features
MT9085C-053	1310/1550 nm SM	46/46 dB	General model for operations and maintenance
MT9085C-057	1310/1550/1625 nm SM	46/46/44 dB	Model with maintenance wavelengths for macrobending analysis
MT9085B-053	1310/1550 nm SM	42/41 dB	General model for operations and maintenance
MT9085B-055	1310/1550 nm, 1650nm SM	41/41/35 dB	Model with built-in filters for in-service (live) circuit maintenance
MT9085B-056	1310/1490/1550 nm SM	42/41/41 dB	Model for FTTx/PON I&M
MT9085B-057	1310/1550/1625 nm SM	40/39/38 dB	Model with maintenance wavelengths for macrobending analysis
MT9085B-058	1310/1490/1550/1625 nm SM	42/41/41/40 dB	Model for FTTx/PON I&M and partial evaluation of CWDM wavelength band
MT9085B-063	1310/1550 nm SM 850/1300 nm MM	42/41dB, 29/28 dB	Model for both SMF and MMF
MT9085A-053	1310/1550 nm SM	39/37.5 dB	General model for operations and maintenance
MT9085A-057	1310/1550/1625 nm SM	37/35.5/32.5 dB	Model with maintenance wavelengths for macrobending analysis
MT9085A-063	1310/1550 nm SM 850/1300 nm MM	39/37.5dB, 29/28 dB	Model for both SMF and MMF

Measurement Applications (OTDR): 2/8

- High Waveform Quality and Analysis Accuracy
 - MT9085 maintains the powerful hardware functions of earlier ACCESS Master's, based on Anritsu's long history of technical excellence with updated higher trace quality and analysis accuracy
- Up to **46 dB Dynamic Range**
 - Loss measurement of optical fibers up to 200 km
 - *Varies with wavelength and optical fiber loss conditions
- **0.8 m Event Dead Zone**
 - Identifies fiber connectors only separated by only a few meters
- High-Quality Realtime Measurements
 - Two realtime measurement modes; support macro bending location identification and easy loss measurement

Realtime Measurement, using High S/N Mode.

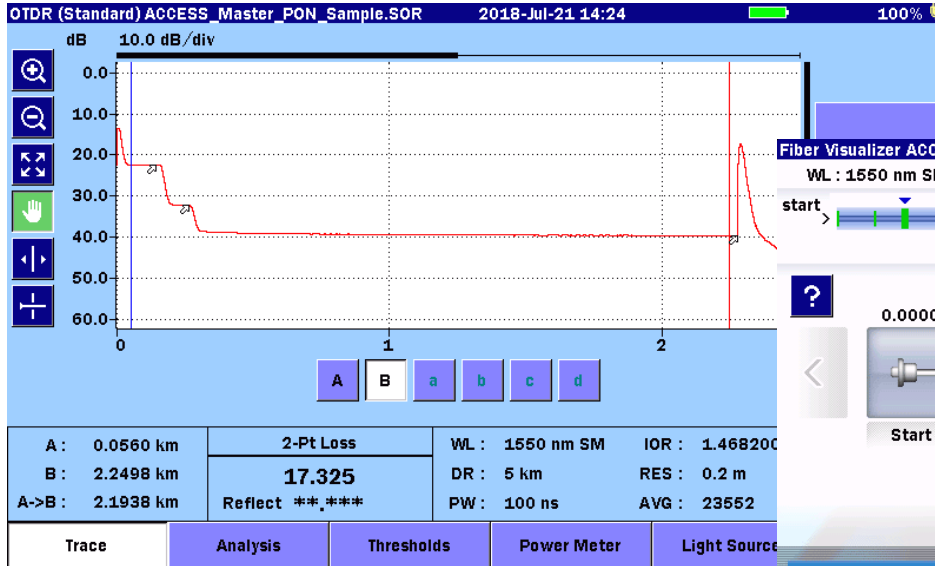

- Noise suppression assures easy loss measurement

Realtime measurement, using High-Speed mode

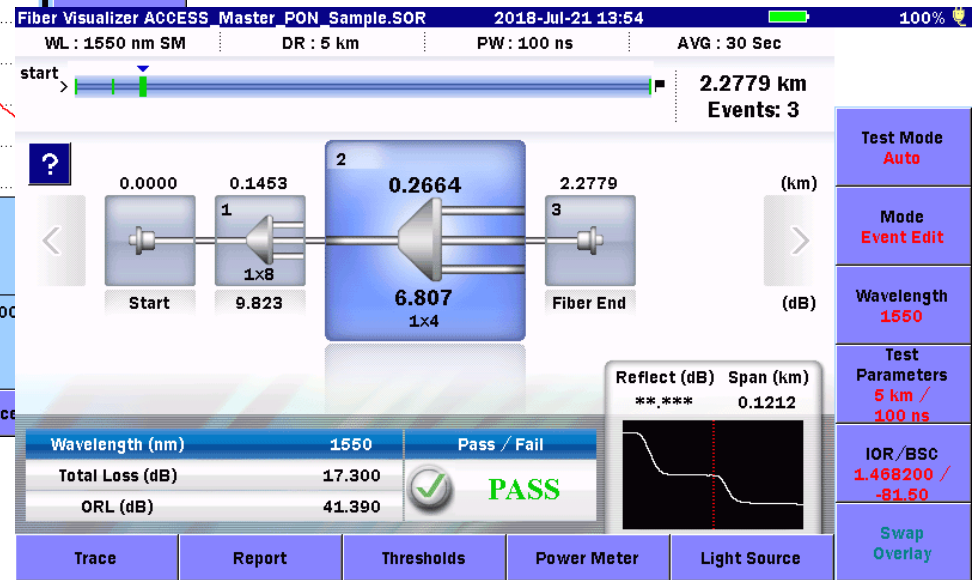

- High speed sweep refresh rate, effective for locating fiber bending

Measurement Applications (OTDR): 3/8

- PON Splitter Analysis for up to 1 x 128 Branches

Loss Measurement and Analysis using OTDR (Standard) Test Menu

Loss Measurement and Analysis using OTDR (Fiber Visualizer) Menu

- *Sample screens are downstream measurement of splitter circuit including 1*8 and 1*4 splitters
- *Refer to following slides for OTDR (Standard) and OTDR (Fiber Visualizer) menus

Measurement Applications (OTDR): 4/8

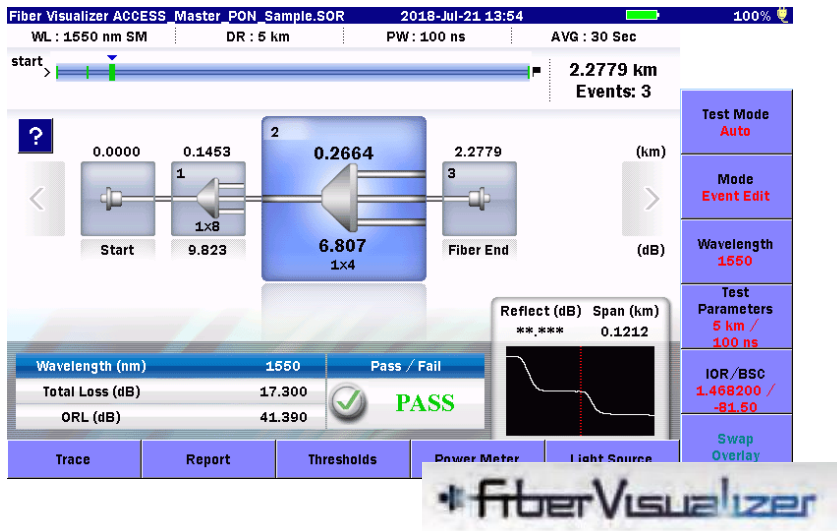

- Two Analysis Modes Matching Measurement Environment and Field Engineer Experience

Maintenance Fault Troubleshooting?
First-Time Operator?

OTDR (Fiber Visualizer)

Automated measurement from setting measurement conditions to Pass/Fail evaluation

Fiber Installation?
Experienced Operator?

OTDR (Standard) Test

Manual measurement from setting measurement conditions to Pass/Fail evaluation

Measurement Applications (OTDR): 5/8

- Fiber Visualizer for Easy Measurement and Analysis

OTDR (Fiber Visualizer)

Pass / Fail indication

Switch screens with one-button operation

Wavelength (nm)	1550
Total Loss (dB)	17.246
ORL (dB)	41.390

Wavelength (nm)	1550
Total Loss (dB)	17.300
ORL (dB)	41.390

Distance (km)	Loss (dB)	Reflect (dB)	Span (km)	Cum. Loss (dB)
0.1453	9.823	**.*	0.1453	0.072
0.2664	8.807	**.*	0.1212	8.893
2.2779	Fiber End	-16.902	2.0148	17.300

- Optical fiber splices, connectors, splitters, etc., are displayed as **easy-to-understand schematic icons** for each event
- Connection loss and reflectance measurements for each event are confirmed **easily at-a-glance from the Pass/Fail Evaluation** results
- Faults are highlighted in red and simple English explains possible cause

Measurement Applications (OTDR): 6/8

- Manual Measurement and Analysis Following Work Order Specification Measurement Procedures

OTDR (Standard) Test

- Trace are evaluated using the 2PA and LSA methods based on the position of four markers to analyze the optical fiber connection loss and reflectance
- Touchscreen operation adds to the feature set from previous ACCESS master models, improving manual analysis and operability

– This method is used for manual analysis when the measurement and analysis conditions are specified in the work order specification requirements

Measurement Applications (OTDR): 7/8

- Increased Multiple Fiber Measurement Enhancing Work Efficiency

OTDR (Standard) Test

Input multiple fiber measurement data (wavelength, measured fiber count, etc.)

1

2

First fiber measurement

Second fiber measurement

...

- Multiple optical fibers can be measured continuously under the same setting conditions
- Automatic saving of the measured data as a .sor file each time
- Every fiber measurement completed improves work efficiency
- Auto naming remove user error and reduces testing time

Measurement Applications (OTDR): 8/8

- Accurate Analysis using Bi-directional Measurement of Optical Fiber Connection Loss

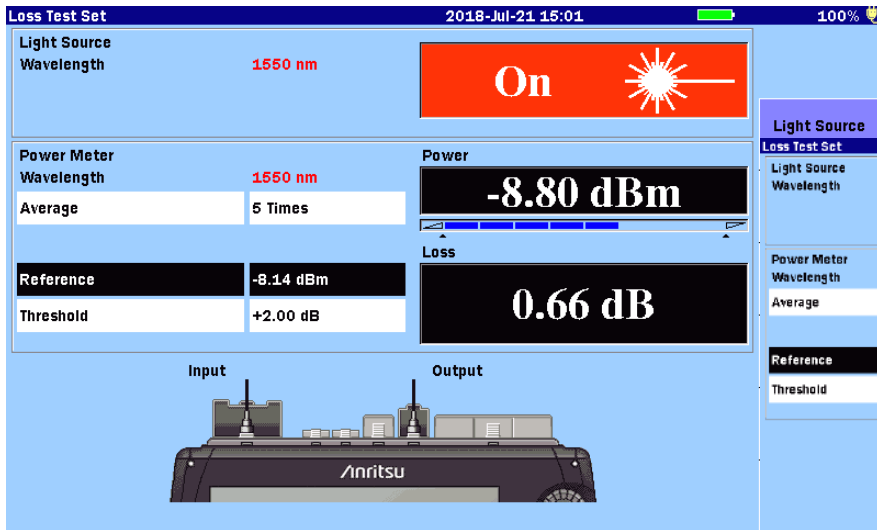

Analyzes by superimposing two traces measured respectively from point A and point B

- When connecting different fiber types it is sometimes impossible to measure connection loss accurately (especially if mixing old and new fiber types)
- Bi-directional trace measurement function supports accurate analysis of loss values by analyzing and combining the results from both directions of the event

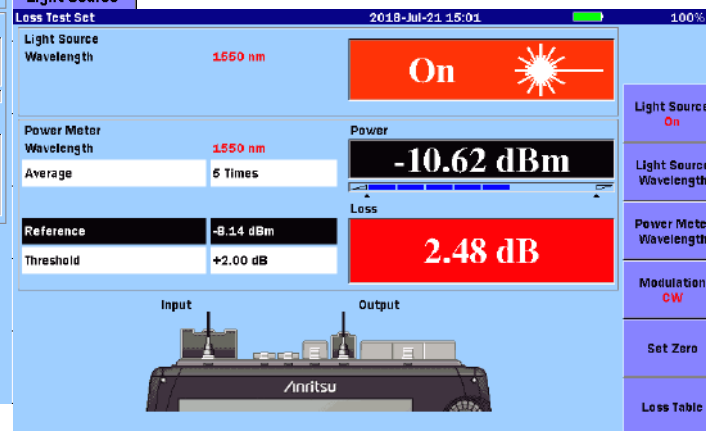

Measurement Applications (OLTS, Optical Power Meter): 1/2

- Key Measurement Function for Evaluating Optical Fiber Installation Condition and Event Status

Displays red background when threshold value exceeded

- The OLTS/Optical Power meter function is used for primary fault evaluation before OTDR tests.
 - The Light Source and Optical Power meter functions are built-in as standard options
 - Optical Power meter option must be installed to use the OLTS function

Measurement Applications (OLTS, Optical Power Meter): 2/2

Measurement Applications (Visual Light Source)

- Improved Work Efficiency by using OTDR, Optical Power Meter and Visual Light Source Simultaneously

Optical Power Meter measurement results are displayed at the top right of the main OTDR measurement screen

The visual light source is operated using a shortcut key.

- The Visual Light Source and Optical Power meter tests can be completed while performing OTDR measurements
 - For example, perform a multiple fiber measurement completing Power Meter and Visual Light Source measurements on other fibers while in parallel performing an OTDR measurements, improving work flow efficiency

Measurement Applications (VIP)

- Checks for Scratches and contamination on Fiber End Face before Optical Power Meter and OTDR Measurements

Used with G0306B (sold separately)

- Test procedures and parameters can be registered in scenarios on the MT9085 using remote commands to fully automate testing without requiring a PC for remote control

Measured Data Management: 1/3

- PDF Reports of OTDR and VIP Results

The collage displays several PDF report sections:

- Graphical Events:** A table with columns for 'Seq', 'Start', 'End', and 'Event Type'. It lists three events with their respective start and end values.
- Trace summary report:** A detailed report including customer information (Amhu), location (Amhu), and test parameters like wavelength (1625 nm), distance range (5 km), and pulse width (100 ns). It includes a 'Test Result Summary' showing 'PASS' and a 'Trace' graph.
- VIP Test Result:** A report titled 'VIP Test Information' with fields for file name, date, time, and test ID. It includes an 'Analysis Result' section with a 'FAIL' status and a 'Results' table.
- OTDR Trace:** A graph showing signal strength over distance, with a prominent peak and a 'FAIL' label.
- Test Parameters Table:**

Seq	Start	End	Event Type
1	0.1453	0.623	11111
2	0.2094	0.607	11111
3	0.2779	0.627	11111
- Test Parameters Table:**

Wavelength	Distance Range	Pulse width	Average	Resolution
1625 nm	5 km	100 ns	30 km	0.2 m
- Test Result Summary:**

File Name	Start	End	Event Type	Count	Area	Gradient	Count
1625	0.1453	0.623	11111	0	0.000	PASS	0
1625	0.2094	0.607	11111	2	577	PASS	0
1625	0.2779	0.627	11111	0	0.000	PASS	0
- VIP Test Information:**

File Name	Start	End	Event Type	Count	Area	Gradient	Count
1625	0.1453	0.623	11111	0	0.000	PASS	0
1625	0.2094	0.607	11111	2	577	PASS	0
1625	0.2779	0.627	11111	0	0.000	PASS	0
- OTDR Trace:** A graph showing signal strength over distance, with a prominent peak and a 'FAIL' label.

The screenshot shows a software interface with various data tables and a map. A large camera icon is overlaid on the interface, with the word 'Screenshot' written above it. Below the screenshot, there is a note:

*The Screen Capture function is useful for saving measured data easily using a shortcut key.

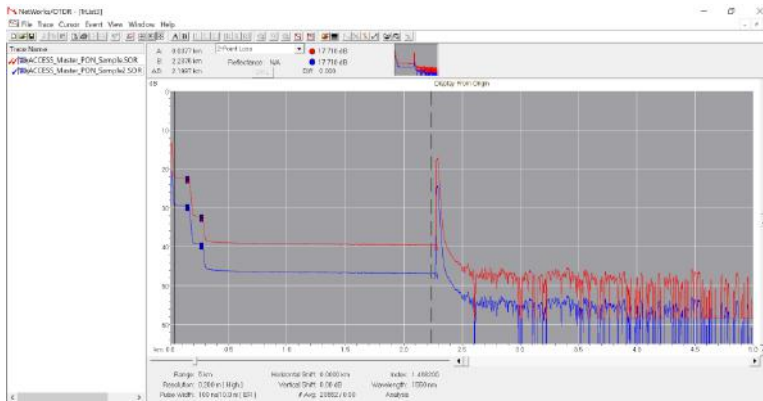

- OTDR (Fiber Visualizer) measurement results output as PDF reports
- Can be combined with VIP analysis results into a single comprehensive test report

Measured Data Management: 2/3

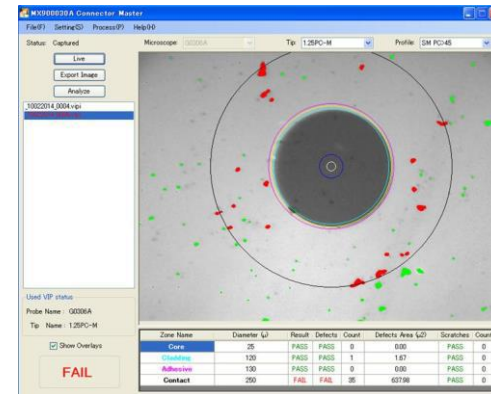

- Measured Original Data Analyzed by Connected PC

Methods for Saving MT9085 Measured Data

	 Original Data File	 Screen Capture	 .csv File	 PDF Report Output
OTDR	✓	✓		✓
OLTS		✓	✓	
VIP	✓	✓		✓

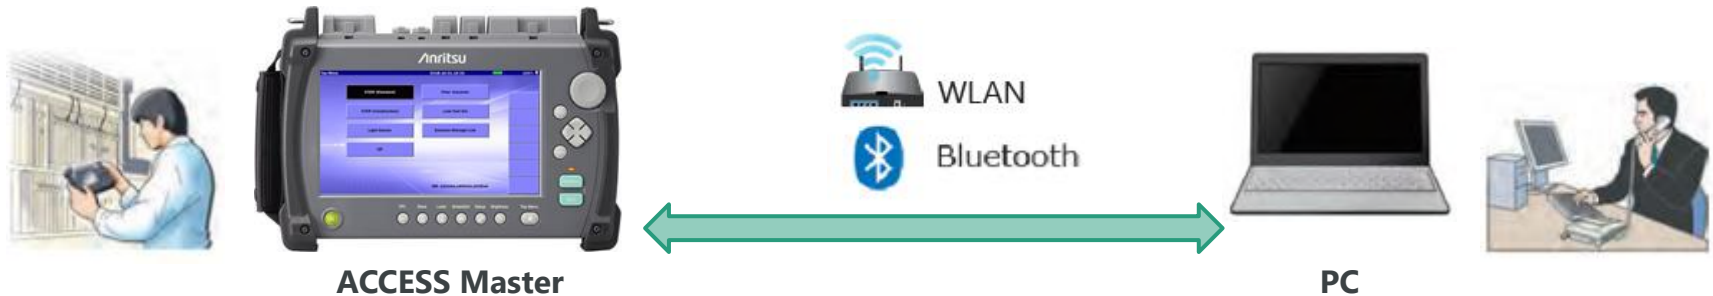

NETWORKS: OTDR Trace Analysis using Emulation Software (chargeable)

VIP Analysis Screen using Connector Master MX900030A on PC (free-of-charge)

Measured Data Management: 3/3

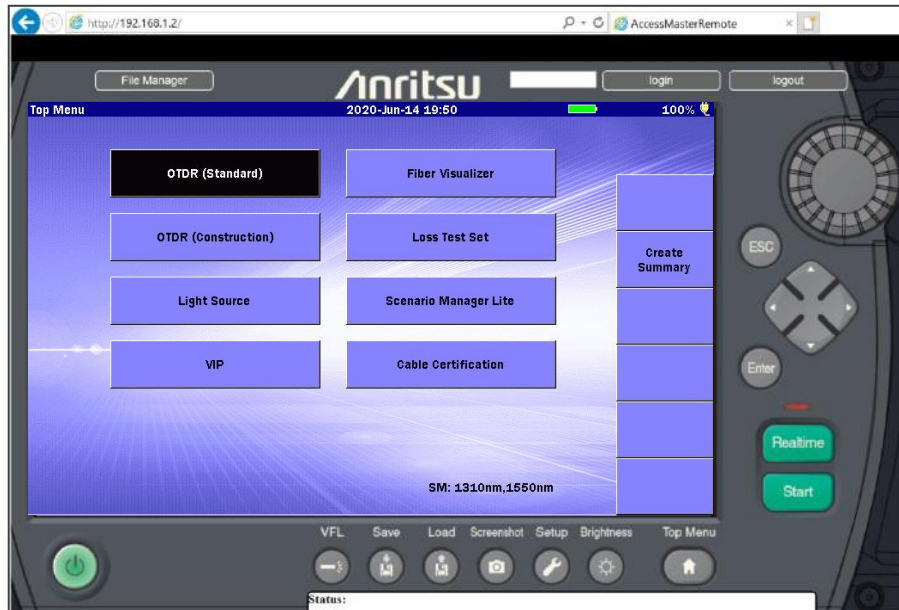

- Share Measured Saved Data and Report Files with PC via WLAN / Bluetooth Wireless Network

- Simple transfer of files and reports from MT9085 series to a PC using WLAN and Bluetooth*
 - *Requires external USB dongle adapter
- Share files using USB memory or USB cable

External Measurement Control

- Remote Control of MT9085 from PC using Remote GUI and Remote Commands

PC External Control Screen using Remote GUI

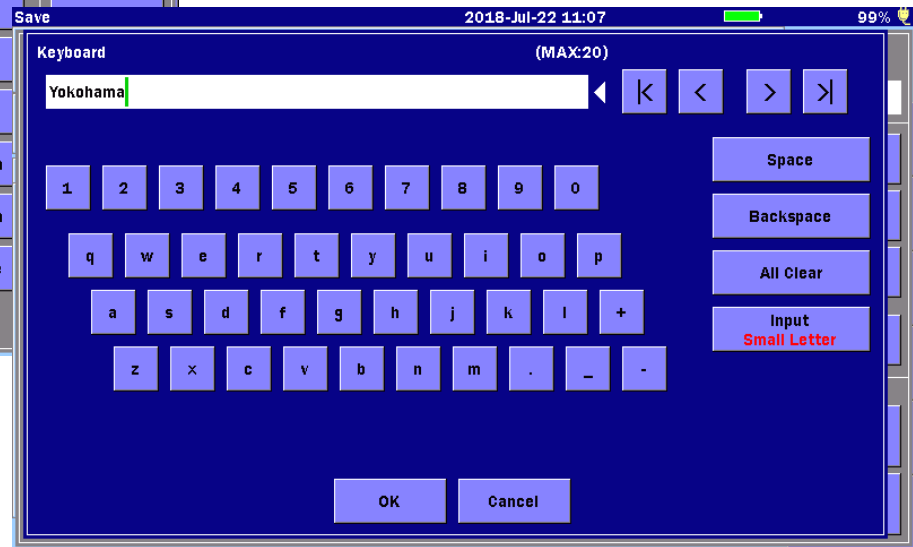

- MT9085 series can be remote-controlled via WLAN and Ethernet interfaces using both a remote GUI (web browser) and remote commands
 - *WLAN communications requires USB dongle adapter
 - *Ethernet connection requires USB–Ethernet conversion cable

Other Useful Functions: 1/2

- Better Work Efficiency with File Name Input Support Function

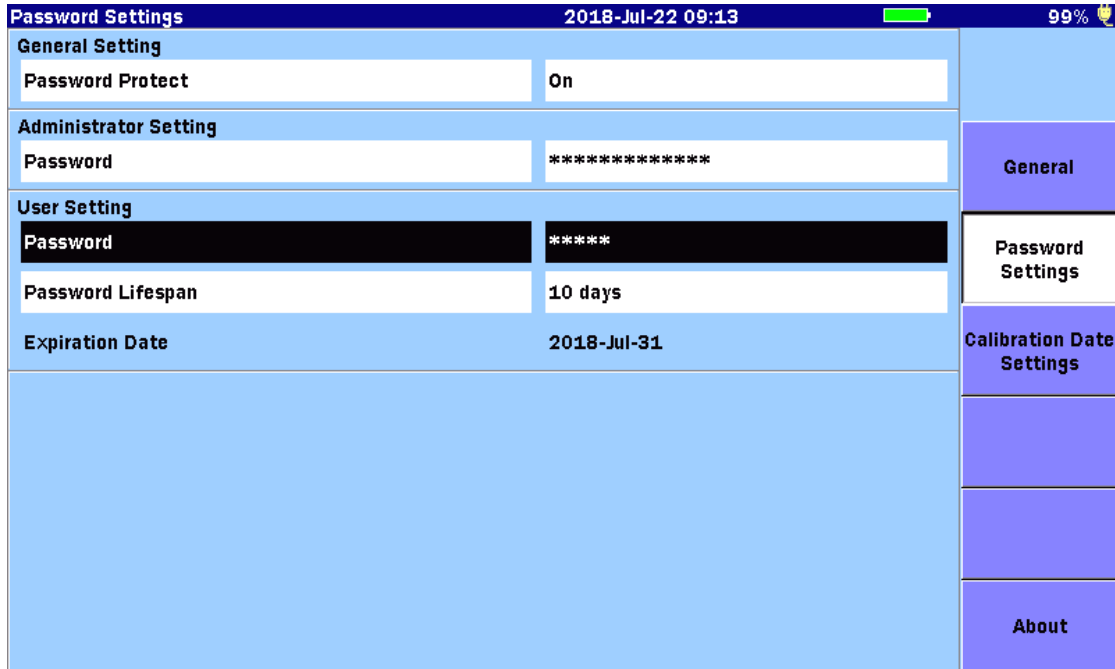

Adding touchscreen operation to the previous ACCESS Master design improves operability for manual analysis

- Many data files are required to be saved when the OTDR is configured to measure multiple fibers.
- The MT9085 series has a built-in function to simplify filename input
 - Automatically incrementing the file name based on the measurement setting conditions (wavelength, pulse width) and fiber number

Other Useful Functions: 2/2

- Password Protection Function protects Important Internal Data

- MT9085 series has a built-in password protection, requiring password input after booting the tester
- Not only protects important internal data but also limits use to approved users

Main Specification: 1/2

Dimensions and Mass	Without Protector	Dimensions: 270 (W) × 165 (H) × 61 (D) mm
		Mass: 1.6kg without battery, 1.9 kg Including battery
	With Protector (Option 010)	Dimensions: 284 (W) × 200 (H) × 77 (D) mm
		Mass: 2.6 kg including battery

W3974AE	MT9085 Series Quick Guide : 1pc
Z1625A	AC adapter : 1pc
	Line cord : 1pc
Z0921A	Battery Pack : 1pc

2) Specify at least one module option (wavelength).

Model/Order No.	Name
	– Module Option (OTDR) –
	High Performance Model
MT9085C-053	SMF 1.31/1.55 μ m OTDR
MT9085C-057	SMF 1.31/1.55/1.625 μ m OTDR
	Enhanced Model
MT9085B-053	SMF 1.31/1.55 μ m OTDR
MT9085B-055	SMF 1.31/1.55/1.65 μ m OTDR
MT9085B-056	SMF 1.31/1.49/1.55 μ m OTDR
MT9085B-057	SMF 1.31/1.55/1.625 μ m OTDR
MT9085B-058	SMF 1.31/1.49/1.55/1.625 μ m OTDR
MT9085B-063	MMF 0.85/1.3 μ m & SMF 1.31/1.55 μ m OTDR
	Standard Model
MT9085A-053	SMF 1.31/1.55 μ m OTDR
MT9085A-057	SMF 1.31/1.55/1.625 μ m OTDR
MT9085A-063	MMF 0.85/1.3 μ m & SMF 1.31/1.55 μ m OTDR

*Refer to the separate catalog for details.

Ordering information: 2/2

3) Specify at least one optical connector.

Model/Order No.	Name
	– Option (Connector) –
MT9085A/B/C-025	FC-APC Connector Key width 2.0mm
MT9085A/B/C-026	SC-APC Connector
MT9085A/B/C-037	FC Connector
MT9085A/B/C-038	ST Connector
MT9085A/B/C-039	DIN47256 Connector
MT9085A/B/C-040	SC Connector

4) Choose from the following options.

Model/Order No.	Name
	– Option (Visual light Source) –
MT9085A/B/C-002	Visual Fault Locator
	– Option (Power Meter) –
MT9085A/B/C-004	SMF Optical Power Meter
MT9085A/B/C-005	SMF High Power Optical Power Meter
MT9085A/B/C-007	SMF/MMF Optical Power Meter
	– Option (Others) –
MT9085A/B/C-010	Protector

*Refer to the separate catalog for details.

With Protector (Option 010)
